Drives

**SIEMENS**

## Background

On 01/10/2010 Siemens announced the 10-year product phase-out for the Simovert Masterdrives drive system.

The product's discontinuation marks the end of support, repair support and spare parts supply as of 01/10/2020.

## Drive systems

For larger systems a gradual replacement of your multi-motor or multi-axis systems is possible. It is possible to replace the individual components in various maintenance shutdowns.

**Retrofit**

## Modernization / Retrofit

To ensure sustained operation of your machines and systems in future, your existing MASTERDRIVES MC or VC should be replaced by the Sinamics successor system.

After product phase-out, sourcing spare parts becomes increasingly difficult, which may lead to extended downtimes in case of malfunctions. Spare parts from the current Sinamics product range are already significantly cheaper and can be delivered more quickly.

## HEADING FOR THE FUTUTE WITH US

- ✦ With more than 50 locations throughout Germany, we are always close to our customers and their plants. This means that we are always quickly accessible and always in a position to react promptly.
- ✦ Actemium Germany is part of the international Actemium network of the VINCI Energies Group. We have a global presence with 22,000 employees and 400 business units in 41 countries.
- ✦ We also accompany you in your projects on all continents.
- ✦ Locally present – globally connected, that is Actemium's strategic orientation.
- ✦ Actemium is a vendor-independent system integrator.
