Preparing the future together Your partner of choice for advancing technologies

Your strong partner

We design, install and maintain industrial and infrastructure systems. We offer you profound know-how in the fields of automation and process control technology, electrical engineering, measurement, instrumentation and control systems, through to power supply and plant engineering. We aim to be the leading international provider for safe, sustainable, performance-oriented solutions and services for industry.

Flexible and manufacturer-independent

Actemium is an independent systems integrator. In cooperation with our

extensive network of experts we are able to provide you with precisely the right solutions to match your needs – independently of the manufacturer. Our teams cover the entire life cycle of facilities and systems – from engineering and implementation, to maintenance and servicing.

Present where you are

In Germany, our experts are present at over 50 locations. This means we are always in close proximity to our customers and their facilities.

Benefits for you: quick availability, rapid response times and comprehensive know-how on site.

Excelling ourselves for you

We are an international provider of safe, sustainable and performance-oriented solutions and services.

- ✦ Automation technology
- ✦ Process control engineering
- ✦ Electrical engineering
- ✦ Measurement
- ✦ Instrumentation
- ✦ Control technology
- ✦ Energy efficiency
- ✦ Safety engineering

Supporting you at every stage of the project:

PLANNING

IMPLEMENTATION

MAINTENANCE

“Our extensive network enables us to offer global as well as local solutions - and meet all your expectations.”

Our **extensive Group network** connects our roots with **an international presence**

A worldwide presence with Actemium: a member of the successful VINCI Energies Group

Locally present – globally connected

Thanks to an exceptionally extensive network of 300 business units in 35 countries around the world, Actemium is able to offer global as well as local solutions. This approach was developed to enable us to meet our customers' growing demands and expectations. Our experienced staff support your projects personally and comprehensively – around the globe. You always have a competent contact person nearby who will support you in the areas of electrical engineering and automation.

The Actemium network is made up of business units that are transparent size and cooperate closely with our

customers in their local markets. Each business unit specialises in one or more market segments in which they have the respective professional expertise.

The business units integrated into our network collaborate closely with one another and coordinate small- and large-scale initiatives depending on requirements. We deploy the best specialists for the job in order to deliver the best possible solutions and services for our customers.

VINCI Energies

Actemium is a brand within the internationally operating VINCI Energies Group. From installation and outfitting, via operation and optimisation of

energy, transport and communication infrastructures, industrial plants and building technology – backed by our parent company we offer wide-ranging know-how and pooled expertise along the entire life cycle of your projects.

Actemium worldwide

- ✦ More than 300 business units
- ✦ Over 35 countries on four continents
- ✦ 19,000 engineers and technicians
- ✦ Sales of 2 billion euros (2013)

Our network with over 300 business units supports you locally and globally

Experience and competence in all process areas satisfy all your requirements

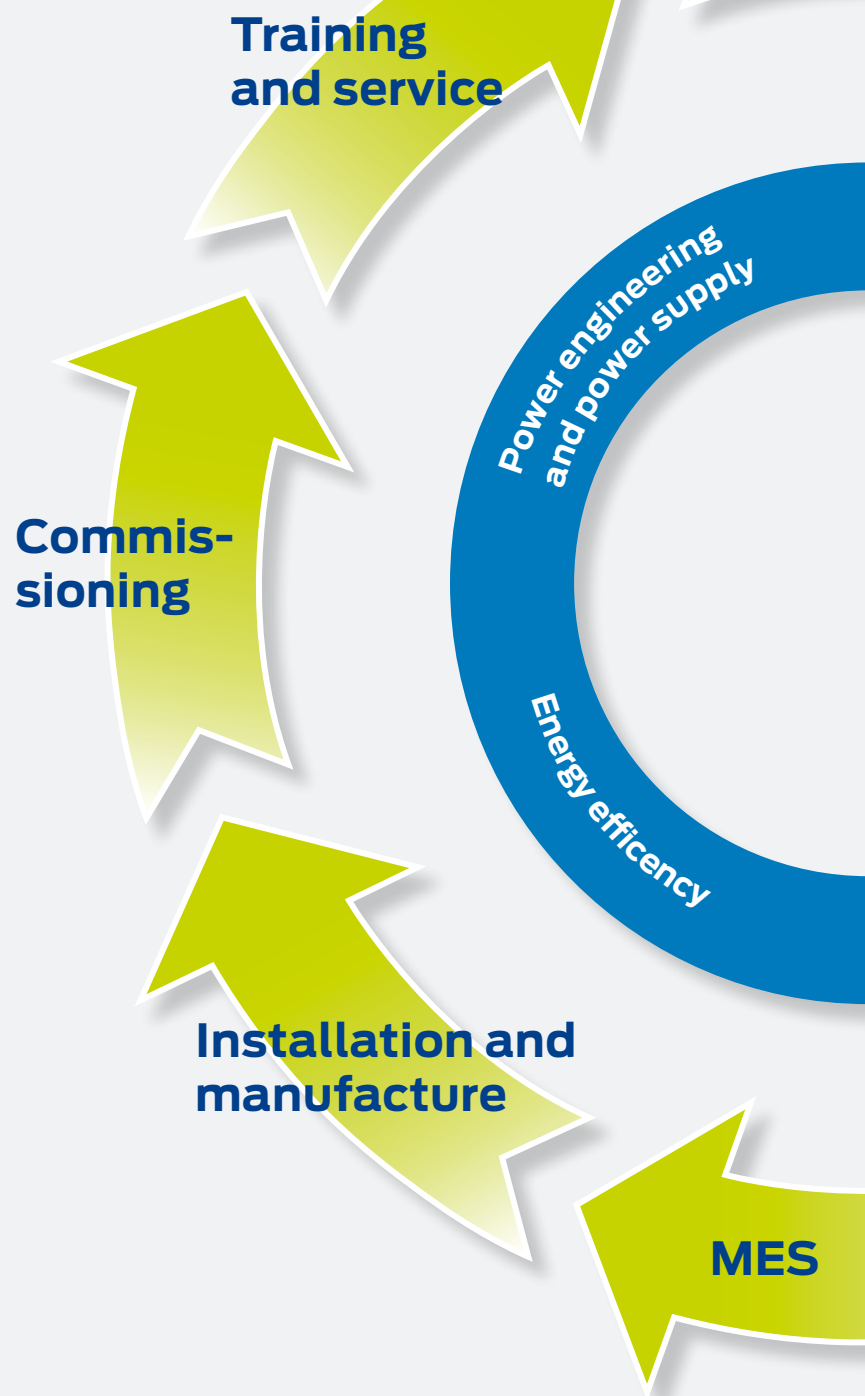

**Customised solutions from
Actemium: for efficient and
successful facilities**

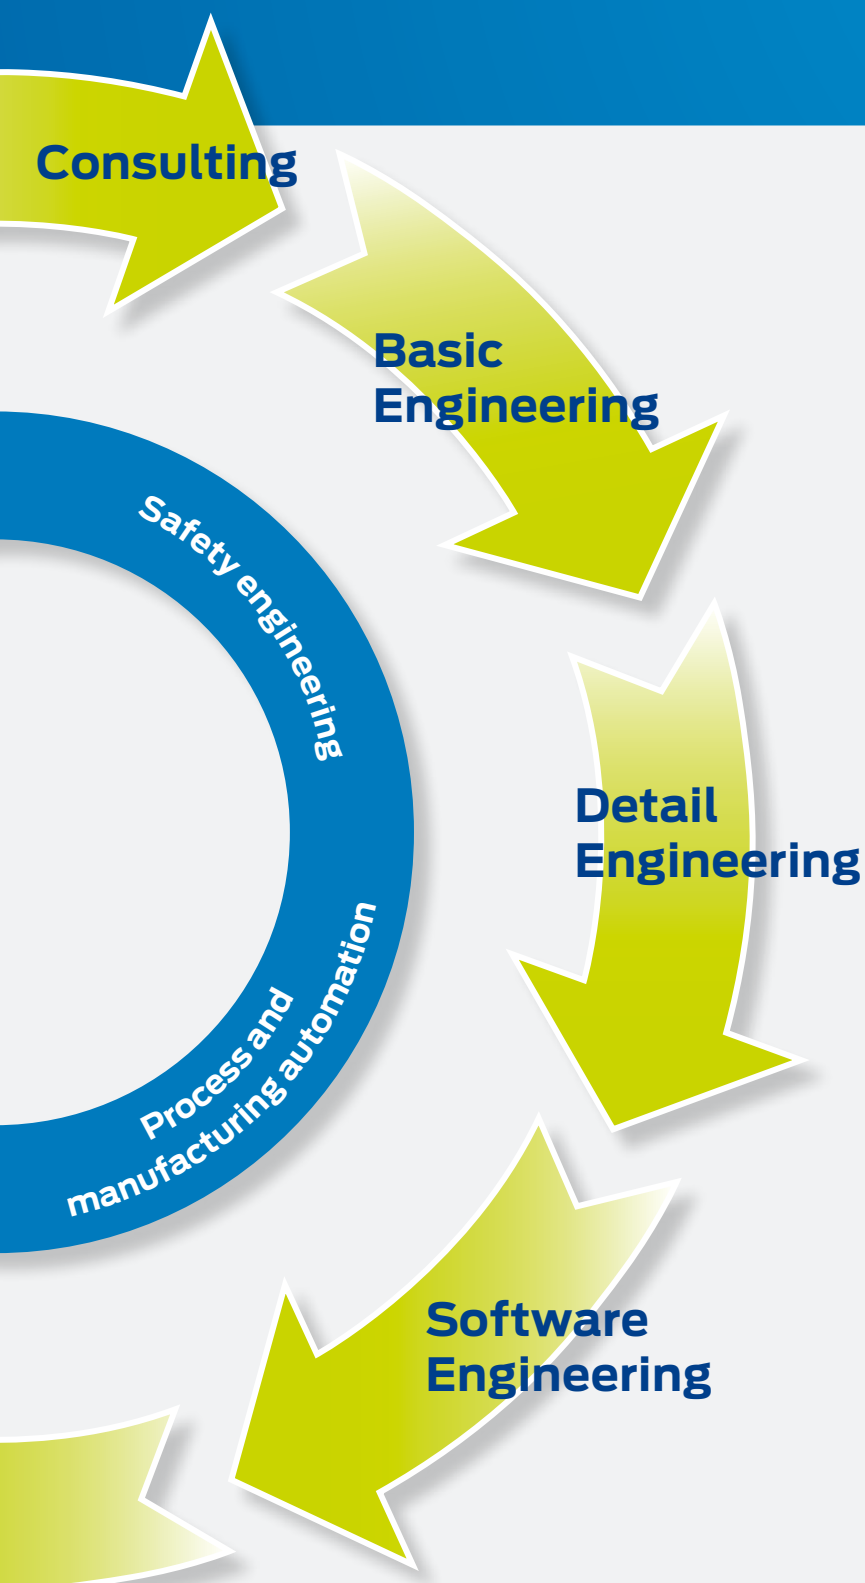

Diverse options

Stand-alone projects, complete packages or whole systems – Actemium provides individual, tailor-made solutions. We support you with our know-how in all areas of industry and across the entire production process. With our expertise in project management, contract management and the implementation of best practices we assure reliable realisation of your set objectives.

For you this means enhanced industrial performance of your facilities. You benefit from:

- ✦ Optimised productivity
- ✦ Lower energy consumption
- ✦ Higher availability and service life of the installations
- ✦ Improved organisation, optimised maintenance costs
- ✦ Innovative guarantees of results

Energy efficiency/energy management

Our energy specialists analyse your current energy situation with respect to energy input, energy flow and energy consumption.

The result of this analysis allows us to make an initial estimate of the energy-saving potential and draw up an energy-saving concept tailored to your requirements.

In this we give regard to manufacturer neutrality and respect all relevant standards and directives, including your works regulations.

We calculate the cost-effectiveness of the concept and offer to implement it at a fair price, whether energy data collection systems, individual energy-saving measures or the introduction of an energy management system.

Thanks to our continuous presence and work on committees such as Namur, VDI (German Association of Engineers) and ZVEI (Association of the Electrical Engineering and Electronics Industry), we are always abreast of new developments in the areas of technology, standards and legislation.

Complex requirements demand **comp** **specialists with industry-specific kno**

Reliability in all areas of power, safety and automation technology

Our know-how is used in many areas of application:

- ✦ Power engineering: high- and low voltage
- ✦ Process control engineering; automation, measurement, instrumentation and control systems, analytics and process IT
- ✦ Mechanical engineering, machinery, pipelines, welding, metal assemblies and hydraulic equipment

We combine our specific industry expertise with our segment know-how and network competence for efficient and customised systems and installations. Our individual business units are specialised in different industries, enabling them to provide you with targeted support.

“We live our corporate values every single day to enable us to meet your and our full potential.”

Maximum safety guarantees optimum results and maximum satisfaction

Safety is our top priority and is the key to success: working together to achieve this

Our basic values

We work in accordance with the basic values of the Actemium network:

- ✦ Safety
- ✦ Networking
- ✦ Positive attitude
- ✦ Team spirit
- ✦ Contribution to our mutual success

These values are what our brand stands for and characterise us as a dynamic and future-proof network.

The more than 19,000 employees in Actemium's international network share these values and help to make you even more successful – now and in the future.

Safety

Occupational safety has absolute priority and is the basic prerequisite for all we do. Our goal: zero accidents. A reliable and high-quality management system guarantees these stringent safety requirements. For example, our staff receive regular training to ensure they are fit in the application of new technologies and can actively put our safety concept into practice.

Some of our certificates:

- ✦ Quality management system
ISO 9001:2008
- ✦ Occupational safety management system
 - SCC** Version 2011
 - OHSAS 18001:2007
- ✦ Environmental management system
ISO 14001:2004

QUALITY

We place the highest demands on top-quality solutions for your installations.

SAFETY

We ensure that all project stakeholders actively put our safety requirements into practice.

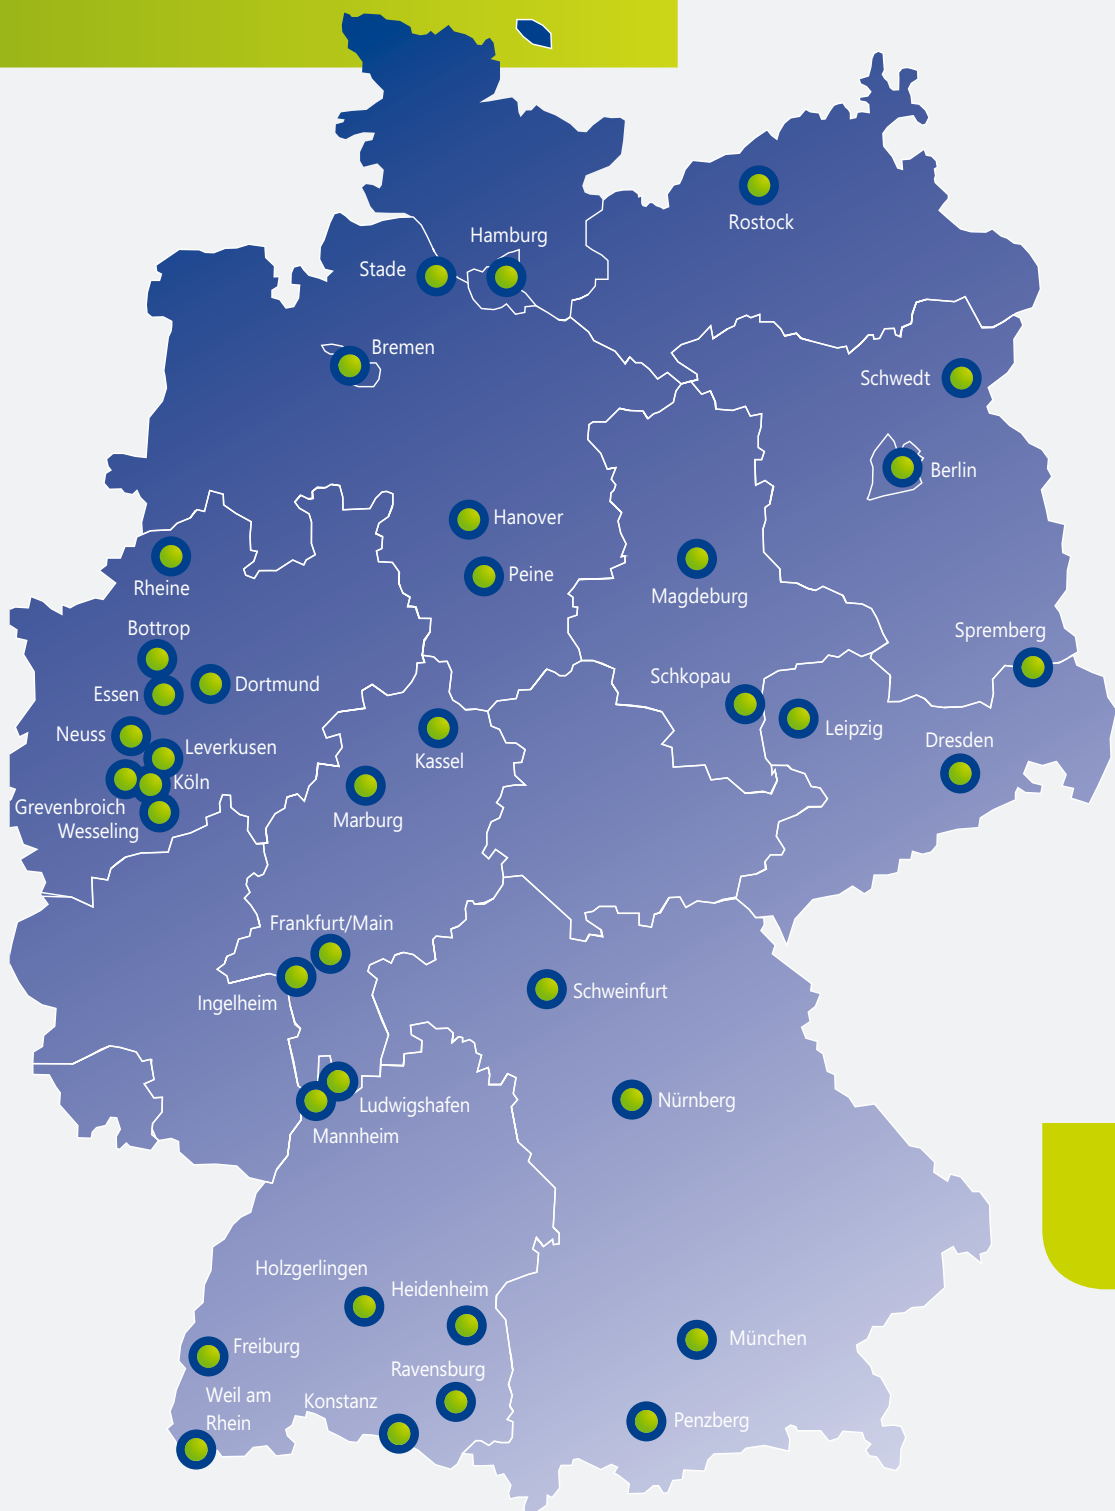

ENVIRONMENT

Our solutions comply with all current environmental and resource protection regulations.
